TOTAL MIGRATION TIME

Case Study - Situation

World leading lessor was seeking solutions to host, manage and update maintenance and compliance records for a fleet of 300+ aircraft and engines. With a mixed fleet of end-of-life, mid-life and new assets, the client needed a scalable, robust, secure and modern Records Management solution to meet both its current and future business needs.

Remedy

Acumen provided a balance of technical knowhow, borne from supporting field operations for almost two decades, combined with SPARTA's Records Dataroom. Acumen's Data Management (DM) team, familiar with handling large quantities of asset data, accurately assessed the volume involved and implemented an effective data migration strategy moving records from an existing data warehouse into SPARTA's Online Records Dataroom. Clarity of approach and project capability helped quickly establish a close working relationship with the client's operational team. Acumen successfully traversed client business priorities, ensuring minimal daily operational disruption. Acumen's Digital Transformation Service (DTS) team, handled the client's SPARTA change and customisation requests, providing robust processes with the focus on time frame delivery. Frequent comms were set up between both ops teams to help maximise transparency and dedicated 24x7 customer support was on hand and gave client personnel the assistance they needed, resulting in a seamless, stressless user experience from the get go!

Outcome

The significant portion of the data migration was completed within a span of 3 months, staying true to the operational goals and vision of the project. Acumen continues to deliver on its promise of providing world class service and customer centricity in its every endeavor.
